## **Sound Solutions Ltd | Environmental Policy**

Sound Solutions Ltd is dedicated to promoting awareness and decisions that contribute to achieving environmentally sustainable development. We aim to reflect our commitment to delivering sustainability in our own business practices and through our values and policies. We recognize this to be a continuous process of improvement rather than a steady-state and we seek to improve our performance, and that of our suppliers, over time. Our Environmental Policy expresses Sound Solutions Ltd's commitment to achieving this aim within our own organisation.

### **OUR IMPACTS:**

Our most significant adverse environmental impacts are:

- Consumption of natural resources in the development, production, marketing and distribution of our products / services and in our general office operations.
- Emissions to the atmosphere from the use of carbon based energy in the sales and distribution of our products / services and our general office operations.
- The environmental performance of our suppliers.
- Production of waste materials

Our most significant positive environmental impacts are working to minimize and mitigate our carbon footprint and to achieve a carbon neutral / carbon positive state, reducing and eliminating waste, promoting renewable sourcing of raw materials, particularly wood-fibre and energy, and working with our suppliers towards a closed-loop material and energy cycle.

### **OUR COMMITMENTS:**

To deliver this Policy Sound Solutions Ltd has the following objectives:

- To oversee and review our environmental policy for all of our operations and to set the future direction of our environmental practices and to seek continuous improvement in our environmental performance.
- To set achievable objectives and targets to improve our environmental performance, including sustainable sourcing, carbon management, the use of ethical supply chains and preventing pollution.
- To comply with relevant legislative and regulatory requirements, identifying and applying the best available techniques wherever possible.
- To provide appropriate information and training for all staff and seek feedback from staff on our environmental procedures and goals.
- To regularly review and audit our environmental practices and work with partners to improve our performance and that of our industry generally.
- To use our resources, to meet these commitments in a manner that reinforces our activities.
- To continually measure our progress where possible in pursuing these objectives.
